Investment Information

Investment Strategy

The fund invests in high quality, short-term debt securities known as money market instruments. These securities include those issued by the US government and its agencies, corporations, banks, supranational organizations and sovereign issuers. These investments are considered low risk due to the financial strength of the issuers and the short-term maturity of the investments. Money market investments are ideal for short-term investors seeking a stable investment that provides interest income and liquidity. Over time, growth potential for money market securities is significantly lower than that of stocks and bonds. This fund is intended for investors seeking current income while preserving the value of their investment principal.

Notes

The Federal Open Market Committee ("the Fed") voted on March 13 to maintain the target range for the federal funds rate at 0.00% - 0.25%, noting that economic conditions would likely warrant "exceptionally low levels for the federal funds rate at least through late 2014." One issue at the forefront of investors' minds is the possibility of additional quantitative easing. Specifically, the form with which the Fed engages in additional quantitative easing could have material implications for short-term markets. If the Fed engages in unsterilized quantitative easing), then money market participants can expect downward pressures on short-term interest rates as the level of excess reserves in the banking system increases. But if the Fed extends its Operation Twist program or engages in sterilized quantitative easing then investors can expect a continuation of higher funding levels and upward pressures on short-term interest rates. Nevertheless, the Fed has made it increasingly clear that additional monetary policy accommodation would be highly dependent on incoming economic data.

LIBOR settings stabilized in March, with 3-month LIBOR hovering around 46 basis points at the end of the month from 48 basis points at the end of February. Three-month LIBOR declined after peaking near 60 basis points in early January; the improvement in sentiment brought about by the turn of the year combined with European Central Bank's expanded liquidity schemes helped improve liquidity conditions during the first quarter.

In the Treasury markets, improved market sentiment contributed to higher Treasury yields as investors shifted away from risk-free assets and opted instead for credit and spread product. Seasonal increases in Treasury bill supply combined with the Fed's current Operation Twist Program kept overnight funding levels elevated. However, quarter-end technical factors and declining Treasury bill supply placed downward pressures on Treasury bill yields during March.

Portfolio Maturity Profile

Performance

The fund returns are reflected net of an annual Investment Management Fee and BlackRock administrative costs, including, but not limited to accounting, custody and audit fees. The fund returns do not reflect the current record keeping fee of 0.0935% and the WSIB fee of 0.0179%. All fees are subject to change.

Additional fee data is available online and in your Investment Guide.

Disclosure

When used as supplemental sales literature, the Investment Profile must be preceded or accompanied by this disclosure statement. The performance data given represents past performance and should not be considered indicative of future results. Principal value and investment return will fluctuate, so that an investor's shares when redeemed may be worth more or less than the original investment. Fund portfolio statistics change over time. The fund is not insured by the Federal Deposit Insurance Corporation ("FDIC"), may lose value and is not guaranteed by a bank or other financial institution.

Fund Structure

The fund described herein is a bank-maintained collective investment fund maintained and managed by BlackRock Institutional Trust Company, N.A. ("BTC"). BTC is a national banking association organized under the laws of the United States and operates as a limited purpose trust company.

In reliance upon an exemption from the registration requirements of the federal securities laws, investments in the fund are not registered with the Securities and Exchange Commission ("SEC") or any state securities commission. Likewise, in reliance upon an exclusion from the definition of an investment company in the Investment Company Act of 1940, as amended (the "Company Act"), the fund is not registered with the SEC as an investment company under the Company Act. Accordingly, certain protections afforded investors in funds registered as investment companies under the Company Act (such as limitations on illiquid investments and oversight by a board of trustees comprised primarily of independent persons) are not available to investors in the fund.

The fund is offered to defined contribution plans ("Plans") that are qualified under Section 401(a) of the Internal Revenue Code of 1986, as amended ("IRC"), and governmental Plans, such as state and municipal government Plans that are described in IRC Section 818(a)(6), such as governmental IRC Section 457(b) Plans. The fund is established and governed by a trust instrument, the Plan of BlackRock Institutional Trust Company, N.A. Investment Funds for Employee Benefit Trusts (the "Plan Document"), which sets forth BTC's powers, authority and responsibilities regarding the administration, investment and operation of the fund. Plans investing in the fund become subject to the terms and conditions of the Plan Document.

Best and Worst 3 Month Performance

Morningstar calculates best and worst 3-month period (in percentage) in-house on a monthly basis.

Best 3-month Period: The highest total return the stock has posted in a consecutive three-month period over the trailing 15 years, or if a fund does not have 15 years of history, it will go back as far as the inception date.

Worst 3-month Period: The lowest total return the stock has posted in a consecutive three-month period over the trailing 15 years, or if a fund does not have 15 years of history, it will go back as far as the inception date.

Growth of \$10,000 Graph

The Growth of \$10,000 graph shows a fund's performance based on how \$10,000 invested in the fund would have grown over time. The returns used in the graph are not load-adjusted. The growth of \$10,000 begins at the date of the fund's inception, or the first year listed on the graph, whichever is appropriate. Located alongside the fund's graph line is a line that represents the growth of \$10,000 in an index. The inclusion of the index allows investors to compare the performance of the fund with the performance of a benchmark index.

Morningstar Rating™

Often simply called the Star Rating, the Morningstar Rating brings load-adjustments, performance (returns) and risk together into one evaluation. To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5% it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

Morningstar Return

This statistic is a measurement of a fund's excess return over a risk-free rate (the return of the 90-day Treasury bill), after adjusting for all applicable loads and sales charges. In each Morningstar Category, the top 10% of funds earn a High Morningstar Return, the next 22.5% Above Average, the middle 35% Average, the next 22.5% Below Average, and the bottom 10% Low. Morningstar Return is measured for up to three time periods (three-, five-, and 10-years). These separate measures are then weighted and averaged to produce an overall measure for the fund. Funds with less than three years of performance history are not rated.

Morningstar Risk

This statistic evaluates the variations in a fund's monthly returns, with an emphasis on downside variations. In each Morningstar Category, the 10% of funds with the lowest measured risk are described as Low Risk, the next 22.5% Below Average, the middle 35% Average, the next 22.5% Above Average, and the top 10% High. Morningstar Risk is measured for up to three time periods (three-, five-, and 10-years). These separate measures are then weighted and averaged to produce an overall measure for the fund. Funds with less than three years of performance history are not rated.

Morningstar Style Box™

The Morningstar Style Box reveals a fund's investment strategy as of the date noted on this report.

For equity funds the vertical axis shows the market capitalization of the long stocks owned and the horizontal axis shows investment style (value, blend, or growth).

For fixed-income funds, the vertical axis shows the credit quality of the long bonds owned and the horizontal axis shows interest rate sensitivity as measured by a bond's effective duration.

For corporate and municipal bonds, Morningstar surveys credit rating information from fund companies on a periodic basis (e.g., quarterly). In compiling credit rating information, Morningstar instructs fund companies to only use ratings that have been assigned by a Nationally Recognized Statistical Rating Organization (NRSRO). If two NRSROs have rated a security, fund companies are to report the lowest rating to Morningstar. If a rating is unavailable or unpublished, then the security or issuer is categorized as Not Rated/Not Available. US Government Securities issued by the US Treasury or US Government Agencies are included in the US Government category. PLEASE NOTE: Morningstar, Inc. is not itself an NRSRO nor does it issue a credit rating on the fund. An NRSRO rating on a fixed-income security can change from time-to-time.

Certain Investment Risks

Investments in the fund are not bank deposits, are not guaranteed by BTC or BlackRock, Inc. or any of their

affiliates, are not insured by the FDIC or any other agency of the U.S. government, and are subject to investment risks, including loss of principal. The fund may be subject to certain key risks set forth below. Some or all of these risks may adversely affect the value of units in the fund, yield, total return and the fund's ability to meet its investment objective. There may be additional risks not identified herein that could adversely affect the fund's performance.

Equity Securities: To the extent a fund invests in equity securities, the fund is subject to equity market risk, which is the possibility that common stock prices will fluctuate over short or even extended periods. Equity securities generally have greater price volatility than fixed income securities. The market price of equity securities may rise or decrease, sometimes rapidly or unpredictably. Equity securities may decline in value due to factors affecting equity securities markets generally, particular industries, sectors or geographic regions represented in those markets, or individual issuers. Different parts of the equity market and different types of equity securities can fluctuate separately in response to issuer, political, market and economic developments.

Fixed Income Securities Risk: To the extent a fund invests in fixed income securities, it will be subject to the following risks. Fixed income securities are affected by changes in interest rates. When interest rates rise, the values of fixed income securities are likely to decrease. Conversely, when interest rates fall, the values of fixed income securities are likely to increase. The values of fixed income securities may also be affected by changes in the credit rating or financial condition of the issuing entities. In addition, there is also a risk that parties who issue securities purchased by the fund may not be financially able to make interest or principal payments when due.

Risks Relating to Investment in Non-U.S. Securities: Investment in non-U.S. securities by a fund or an underlying fund in which the fund may invest is subject to certain special risks and considerations, including potentially less liquidity and greater price volatility than investments in securities traded in the U.S. markets. Investments in securities of non-U.S. issuers are subject to all of the risks of investing in the market of such issuers, including market fluctuations caused by factors such as economic and political developments, changes in interest rates and abrupt changes in stock prices. Other risks associated with such investments include less liquid and less efficient securities markets; greater price volatility; exchange rate fluctuations and exchange controls; less publicly available information about issuers; imposition of withholding or other taxes; higher transaction and custody costs and delays in attendant settlement procedures; difficulties in enforcing contractual obligations; lower levels of regulation of the securities market; and different accounting disclosure and reporting requirements.

Risks of Investing in Commodity Futures: To the extent a fund invests in commodity futures, it will be subject to the following risks. Commodity prices are generally affected by, among other factors, the cost of producing commodities, changes in consumer demand for commodities, the hedging and trading strategies of producers and consumers of commodities, speculative trading in commodities by commodity pools and other market participants, disruptions in commodity supply, weather, political and other global events and global economic factors. Accordingly, commodity prices can change substantially and in a rapid and unpredictable manner. Commodity futures markets are also subject to liquidity risk, and it may not, therefore, always be possible for a fund or an underlying collective trust fund to exit an investment in commodity futures. Transactions in

Disclosure

futures contracts involve certain risks and transaction costs. Risks include imperfect correlation between the price of the futures contract and movements in the price of the underlying index, the possible absence of a liquid secondary market for any particular instrument, the risk of default of the counterparty or guaranteeing agent, and restrictions on trading imposed by futures exchanges due to price volatility. Futures contracts involve the posting of margin deposits, and movement in the underlying index or asset may result in calls for additional payments of cash. The need to make such additional payments could require a fund or an underlying collective trust fund to liquidate securities at a disadvantageous time.

Risks Associated with Investing in Securities of Real Estate Companies: To the extent a fund invests in real estate, it will be subject to the following risks. Investing in companies that invest in real estate, such as real estate investment trusts or real estate holding companies ("Real Estate Companies"), exposes participants to the risks of owning real estate directly, as well as to risks that relate specifically to the way in which Real Estate Companies are organized and operated. Real estate is highly sensitive to general and local economic conditions and developments, and is characterized by intense competition and periodic overbuilding. Real estate is also illiquid, and it may be difficult to sell properties in response to changes in economic or other conditions. Real Estate Companies may be highly leveraged, and may be at heightened risk of liquidation or default if they experience variations in cash flow. Real Estate Companies may also be geographically concentrated, placing them at increased risk from localized catastrophic events or changes in local economic conditions. Investments in Real Estate Companies may also be illiquid, meaning that purchases and sales of interests in a Real Estate Company may have a magnified impact on the price of such interests, resulting in abrupt or erratic price fluctuations.

Fund-of-Funds Risk: To achieve their investment strategy, certain funds may invest their assets through one or more underlying collective trust funds. Each such fund bears the risk of the underlying funds to the extent of its investment in the underlying funds. The investment objective of an underlying fund may differ from, and an underlying fund may have different risks than, the fund. There is no assurance that the underlying funds will achieve their investment objectives.

Passive Investment Risk: Unitholders of funds will not have any control over the activities of the funds. Such unitholders will not have the opportunity to evaluate the relevant economic, financial and other information which will be utilized by BTC in the selection, structuring, monitoring and disposition of investments.

Investment and Trading Risk: An investment in the fund involves risks, including the risk that the entire amount invested may be lost. The fund may invest in and trade securities and other financial instruments using investment techniques with risk characteristics, including risks arising from the volatility of the equity, convertible securities, fixed income, currency markets, the risks of borrowings and short sales, the potential illiquidity of securities and other financial instruments and the risk of loss from counterparty defaults. No guarantee or representation is made that a fund's investment program will be successful. A fund may utilize such investment techniques as option transactions, margin transactions, short sales, leverage and derivatives trading, which practices involve volatility and can increase the adverse impact to which a fund's investment portfolio may be subject.

Securities Lending Risk: To the extent that a fund is

authorized to engage in securities lending activities, it may be exposed to certain risks, including cash collateral reinvestment risk (risk that cash collateral is reinvested at the risk of the lending fund in cash collateral funds managed by BTC ("Cash Collateral Funds") that hold securities and other instruments with a different risk profile than those in the lending fund and which may not achieve their investment objective or suffer realized or unrealized loss due to investment performance), which includes "gap" risk (risk that the return on cash collateral investment is insufficient to pay the rebate fees the lending fund has committed to pay), liquidity risk (risk that the Cash Collateral Funds are invested in securities and other instruments that are less liquid than the lending fund), operational risk (risk of losses resulting from problems in the settlement and accounting process), and credit, investment, legal, counterparty and market risks. At any particular point in time, the Cash Collateral Funds could comprise a material portion of a lending fund's assets. The risks also include those risks associated with the types of investments made by the Cash Collateral Funds.

Risks Relating to Target Date Funds: Risks associated with investing in "target date" funds, such as BTC's LifePath® Funds, include the risk of loss of principal, including losses near, at, or after the target retirement date, and there is no guarantee that any such funds will provide adequate income at or through an investor's retirement.
